

EONASSETSMINING

Database Design Document (V1)

Overview

Database: PostgreSQL. ORM: Prisma. This document defines the core database architecture for EonAssetsMining, covering users, plans, investments, deposits, withdrawals, rewards, gift codes, tasks, spin wheel, news, settings, logs, and platform management.

Core Tables

Admins, Users, Password Resets, Plans, Investments, Investment Profits, Referral Commissions, Gift Codes, Gift Code Claims, Tasks, Task Claims, Daily Checkins, User Checkins, Spin Prizes, Spin Settings, User Spins, Spin Logs, News, Partners, Market Assets, Deposits, Withdrawals, Transactions, Sliders, Countries, Languages, Team Members, Payment Methods, Payout Cryptocurrencies, Email Logs, Email Settings, Settings, About Us, Activity Logs, Admin Logs.

Critical Financial Rule

All balance changes must be recorded in the Transactions ledger table. Balances must never be updated without creating a transaction record.

Relationships

Users → Investments, Deposits, Withdrawals, Transactions, Spin Logs, User Checkins, Task Claims, Gift Code Claims, Referral Commissions. Plans → Investments. Spin Prizes → Spin Logs. Tasks → Task Claims. Gift Codes → Gift Code Claims. Admins → Admin Logs.

Estimated Scale

35+ tables, 150–250 API endpoints, 25–35 admin pages, 15–20 user pages, and multiple background jobs.
